

GREAT WHITE KAOLIN PROJECT PROJECT CONTEXT

To the extent that is possible, there will be no adverse impact on community amenity and wellbeing as a result of mine construction and operations.

In South Australia, the Department for Energy and Mining (DEM) is the Regulator who reviews Mining Proposals. Other government departments, agencies, and the public can provide comment while the Mining Proposal is being considered by DEM, which may then recommend the grant of a Mining Lease by the Minister for Energy and Mining. A defined process is undertaken, as shown below.

A Mining Proposal is developed in consultation with stakeholders.

Andromeda plans to submit a Mining Proposal and Mining Lease Application to DEM in early 2021.

The Regulator reviews all aspects of the Project during the assessment to ensure:

- there is a reasonable prospect that a mineral resource can be 'effectively and efficiently mined'.
- all potential environmental impacts (including ecology, soils, heritage, air quality, noise, traffic, groundwater and surface water) have been identified.
- the proposed level of impact (environmental outcome) is acceptable given the economic and social benefits.
- the proposed control strategies will achieve an acceptable level of impact.
- there is a control mechanism at all stages during the development of the Great White Kaolin Project.
- that Andromeda work to ensure regulatory requirements and community expectations are met at all stages of the mine development, operation and closure.

COMMUNITY ENGAGEMENT

Andromeda recognises that engagement with the community and stakeholders is an ongoing and continuous process.

Understanding the views of the community is a priority for Andromeda. *We are committed to working with the community with open and transparent communication.* To provide feedback on the Great White Kaolin Project, visit www.andromet.com.au
